Hallucinated Evidence

Question: Figure 18 illustrates stresses due to thermal expansion mismatch between layers, yes or no?

Ground Truth: no

Error Reason:
When GPT-4o cannot obtain valid evidence from the image, it tends to cater to the description of the query.
In fact, Figure 17 corresponds thermal-mismatch stress while Figure 18 describes the stress in an aluminum engine block.

P43

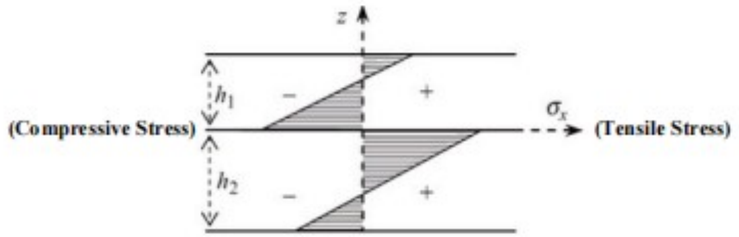

Figure 17: Qualitative stress distribution induced by thermal expansion mismatch between layers [44].

P45

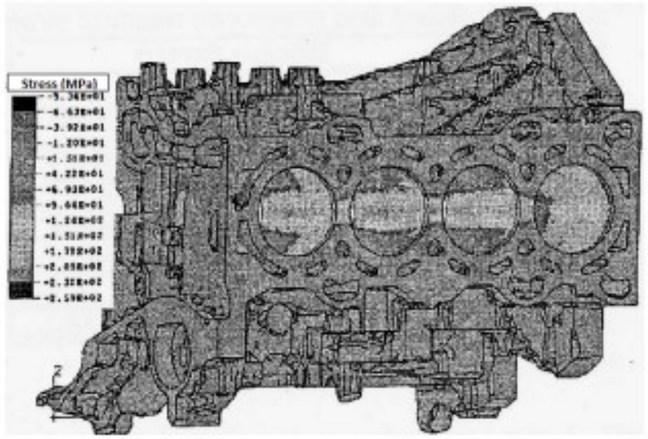

Figure 18: Modeled residual stress distribution of an I-4 319 aluminum engine block with cast-in iron liners [46].

GPT-4o:
Yes, Figure 18 illustrates stresses due to thermal expansion mismatch between layers.
Extractor result: yes
