Generated Question: What are the four main areas of translational and applied research that used the most animals in 2018?

Ground Truth: ["Animal diseases and disorders", "Human cancer", "Human nervous and mental disorders", "Human infectious disorders"]

Reasoning

Generated Question: Where is the majority of non-human primates sourced from in 2018?

Augmented Question: Where is the highest of non-human primates sourced from in 2018?
(A) Asia (B) Africa (C) EU (D) American

Ground Truth: A

IV.2.1.1. Main categories of scientific purposes

In 2018, 10.8 million uses of animals were reported for scientific purposes in the EU-28 including Norway.

Most uses were conducted for research purposes (74%) with 46% of the uses being carried out for basic research and 28% for translational and applied research purposes. A further 18% of animal uses in procedures were carried out for regulatory use to satisfy legislative requirements, followed by routine production (5%). Compared to 2017, the proportion of animals used for translational and applied research increased (+5%) while the proportion of uses for regulatory requirements decreased (-5%).

Model: GPT-4o, Gemini-1.5-Pro, etc.
Description: 10.8 million animals were used for scientific purposes in the EU-28 and Norway in 2018. Research was the primary purpose ...
