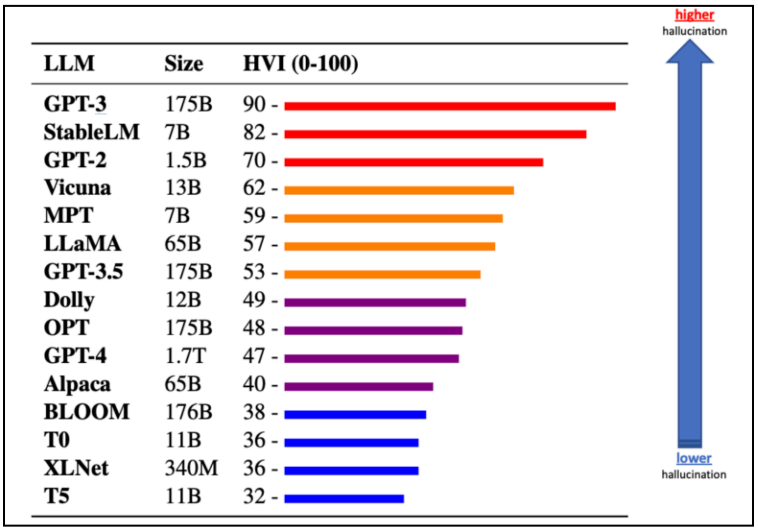
Question: Which large language model achieves a lower HVI score than OPT but a higher HVI score than Alpaca?
Image Type: Figure
Reasoning Type: Comparison
Target Paper: GPT-4



LLM	Size	HVI (0-100)
GPT-3	175B	90
StableLM	7B	82
GPT-2	1.5B	70
Vicuna	13B	62
MPT	7B	59
LLaMA	65B	57
GPT-3.5	175B	53
Dolly	12B	49
OPT	175B	48
GPT-4	1.7T	47
Alpaca	65B	40
BLOOM	176B	38
T0	11B	36
XLNet	340M	36
T5	11B	32

Claude-3-Sonnet Response

Based on the figure, the large language model that achieves a lower Hallucination via Intersection (HVI) score than OPT (HVI score of 48) but a higher HVI score than Alpaca (HVI score of 40) is GPT-3.5 with an HVI score of 53.

Target Paper Ranking: ∞

Error Analysis: The model effectively extracts the HVI score associated with each aforementioned model, demonstrating its data extraction ability in a scientific figure. However, the model incorrectly assesses that 53 is lower than 48 but higher than 40, leading to inaccurate ranking.

Category: Wrong reasoning, Wrong ranking
