Question: What optimization method exhibits an R2 score of 0.191?
Image Type: Table
Reasoning Type: Data Extraction
Target Paper: DPO

	Reward Acc	R1	R2	Rl	Meteor
SALT_{l}	0.368	0.381	0.203	0.371	0.292
SALT_{l+u}	0.591	0.394	0.215	0.383	0.320
$\text{DPO}_{beta=0.1}$	0.484	0.379	0.210	0.369	0.301
$\text{DPO}_{beta=0.5}$	0.532	0.372	0.191	0.361	0.291

Claude-3-Sonnet Response

Based on the figure, the optimization method that exhibits an R2 score of 0.191 is DPObeta=0.5.

Target Paper Ranking: 2

Error Analysis: The model successfully identifies the optimization method associated with an R2 score of 0.191, showcasing its proficiency in extracting data from scientific figure. However, it incorrectly rankes the ground truth paper related to DPO 2nd. The paper that is ranked 1st, titled "Judging LLM-as-a-judge with MT-Bench and Chatbot Arena," has no direct connection to DPO. Given that question does not directly introduce ambiguity and the model does not provide further reasoning for its decision, it can be concluded that the error stems from flaws in its internal reasoning process.
