LLM Consultant

You previously indicated unmet demand results in customers leaving (state_transition_model = 'lost_sale'). You have also stated the penalty cost is $2.80 per unit per day for unmet demand. These two statements conflict: in a lost-sale model unmet demand is a one-time lost sale (so a one-time penalty per lost unit would be appropriate), whereas a per-unit-per-day penalty implies unmet demand is backlogged and accrues daily (state_transition_model = 'backlog'). Please clarify which of the two you intend: (A) Keep state_transition_model = 'lost_sale' and confirm the penalty is actually $2.80 one-time per lost unit (i.e., record unit as "$/unit"), or (B) You want to model backorders so unmet demand accrues a penalty of $2.80 per unit per day (in which case please confirm changing state_transition_model to 'backlog' so the per-day penalty is meaningful). If you intend a different formulation, please specify precisely.

Human Imitator

Keep state_transition_model = 'lost_sale'. Confirm the penalty is actually $2.80 one-time per lost unit.
