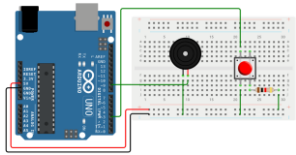
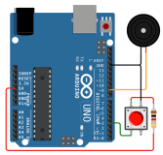
Physical & Logical Circuit

Components: [arduino uno, piezo buzzer, ...]
Physical Connections: [
["breadboard.22h", "arduino uno.9"],
["breadboard.22g", "piezo buzzer.2"], ...]



Components: [arduino uno, piezo buzzer, ...]
Logical Connections: [
["arduino uno.9", "piezo buzzer.2"],
["arduino uno.gnd.1", "piezo buzzer.1"], ...]



Project Description

Arduino project that uses pushbutton to control piezo electric buzzer.
... ...
The test is successful when: Piezo buzzer runs when the button is pressed. The piezo buzzer doesn't sound when the button is not pressed.

Code

```
void setup() {
    pinMode(BUTTON_PIN, INPUT);  pinMode(BUZZER_PIN, OUTPUT); }
void loop() {
    if (digitalRead(BUTTON_PIN) == LOW) { tone(BUZZER_PIN, 262, 250); } else noTone(BUZZER_PIN); }
```

Circuit

Test Procedure

Press Button
-> Generate 262Hz tone

Release Button
-> Stop tone generation

Success or **Failure**
