$m_{k-1}(\theta), C_{k-1}(\theta)$
Compute $\nu_k(\theta)$ using ***variational inference:*** minimize $KL(\nu_k || \nu_k^*)$
$\nu_k(\theta)$
...
$\theta^{(i)} \sim \nu_k(\cdot)$
Supervised learning for computing $m_k(\theta)$ and $C_k(\theta)$
target values for supervised learning:
$m_k^*(\theta^{(i)}) = F_m(m_{k-1}(\theta^{(i)}), C_{k-1}(\theta^{(i)}), y_k, \theta^{(i)})$
$C_k^*(\theta^{(i)}) = F_C(m_{k-1}(\theta^{(i)}), C_{k-1}(\theta^{(i)}), y_k, \theta^{(i)})$
$m_k(\theta), C_k(\theta)$
...
